Configurable Panel PC Introduction

One major disadvantage of traditional panel PCs is the lack of flexible configuration, which limits customers to the system options chosen by the manufacturer. To address this problem, Advantech developed the industry's first configurable panel PC that allows system integrators to select any mini-ITX motherboard (MB) for installation by Advantech engineers.

## For Certified Motherboards (Listed in the Selection Table)
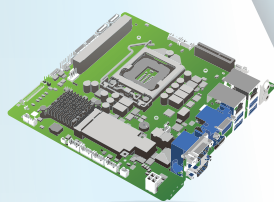

Choose a Certified MB

Choose a certified mini-ITX MB according to functionality, CPU, I/O, and price.

Select a Chassis

Find a corresponding chassis and CPU cooler according to the selected MB.

Configure the System

Configure the MB, chassis, CPU, and other components.

Assemble with CTOS

Assemble and test the configuration with Advantech's CTOS in just 7 days.

For Non-Certified Motherboards

In addition to providing a list of pre-certified motherboards that can be installed in just 7 days, Advantech can conduct essential validations of compatibility, reliability, and EMC to certify any off-the-shelf motherboard within 30 days.

Only 30 Days for Validation

Compatibility Testing

Advantech's Design Quality Assurance team conducts stress tests to verify functionalities, compatibility, and I/O.

Reliability Testing

Advantech verifies operational temperature and thermal profile, and conducts shock and vibration tests.
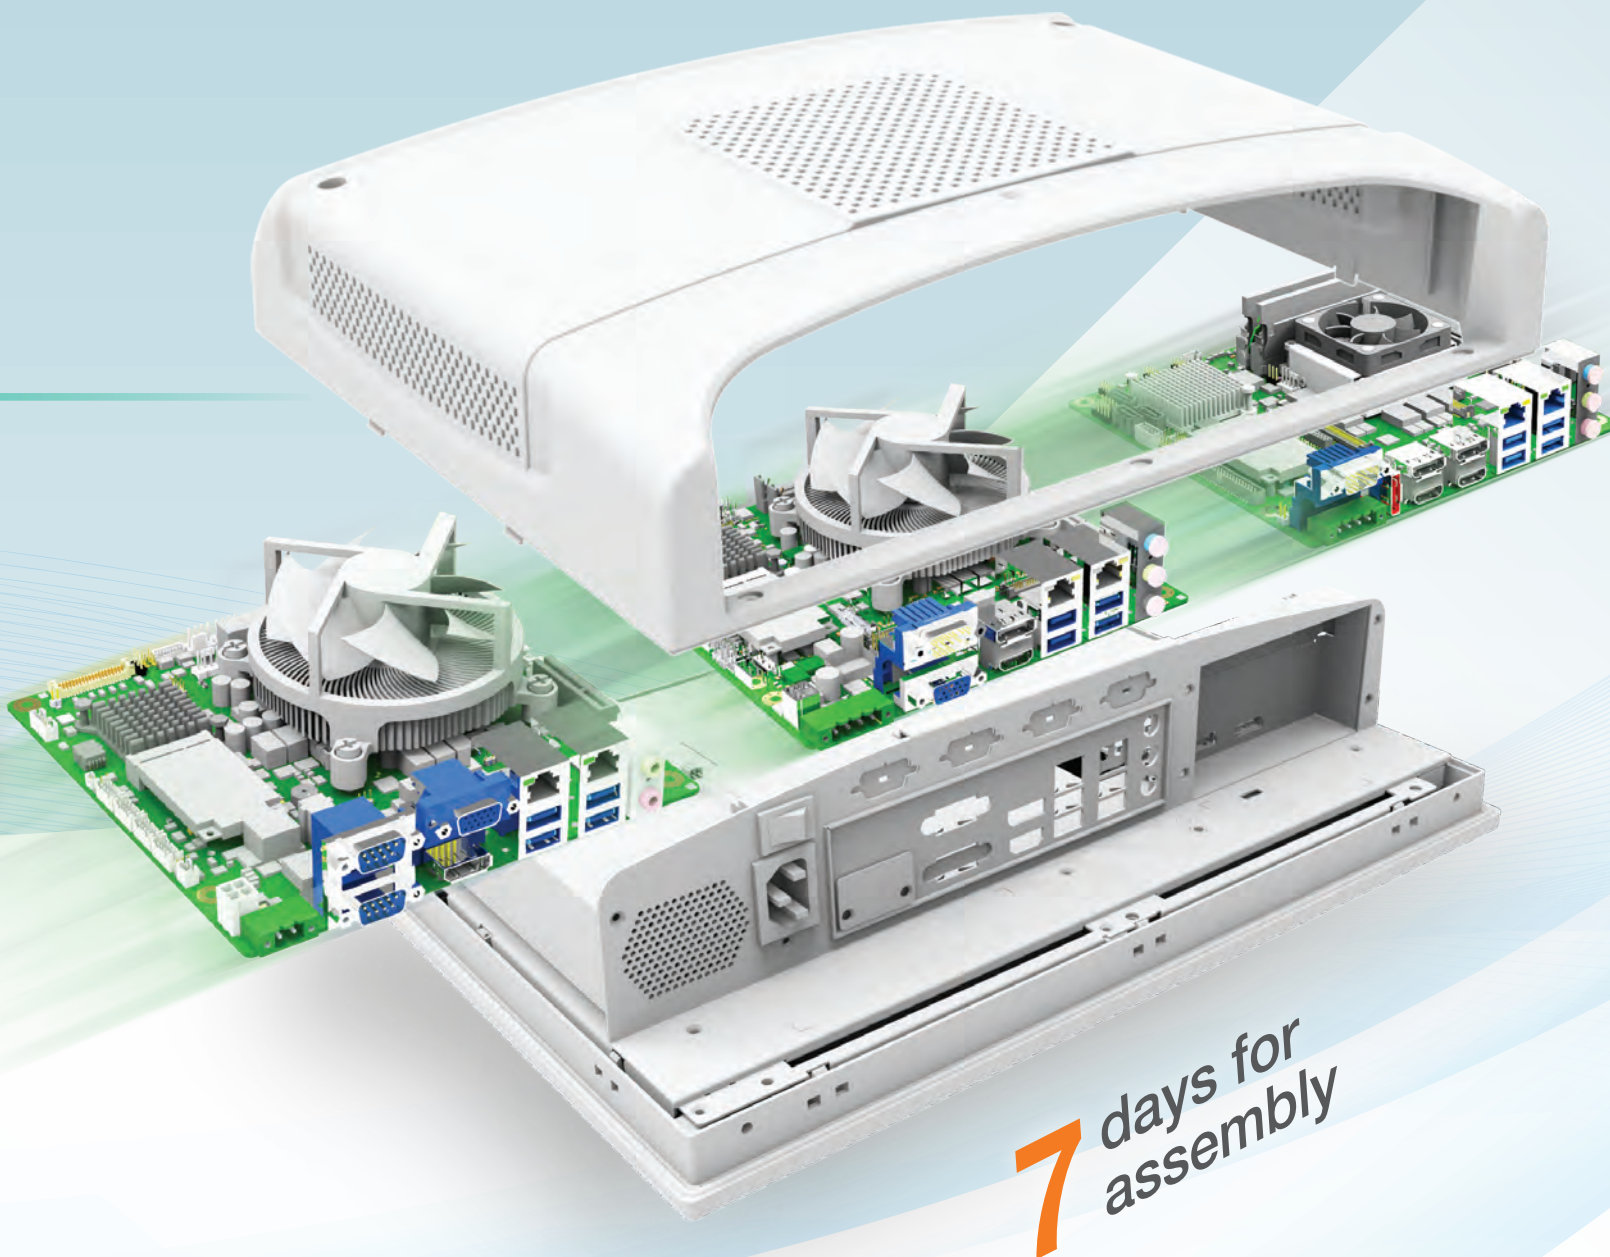

EMC Testing

Pre-scan tests for EMI and EMC are conducted in certified laboratories.

Certified MB

MB is certified and added to the Selection Table.

Easy On-Site Maintenance

Because of the high cost of maintaining global after-sales services, system integrators require panel PCs that can be repaired and upgraded in the field directly. With its innovative modular design and fewer assembly screws, Advantech's PPC-6000C series allows technicians to conveniently conduct maintenance and servicing on-site.
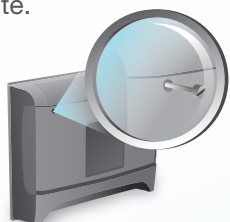

Fewer Screws
The simple modular design and few screws required streamline system assembly.
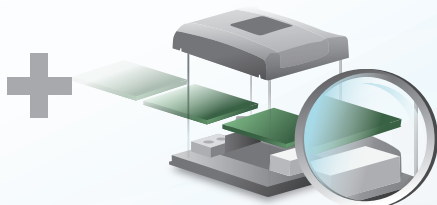

Modular Design
System components, such as the PSU, MB, fan, and riser card, can be installed and removed independently.

Easy In-Field Replacement
Defective parts can be easily replaced on-site in the field, eliminating the downtime and cost of sending the system to an RMA center.

Features

The PPC-6000C series of panel PCs not only allows customers to configure the system according to their needs, but also features various industrial functionalities to support a wide range of applications.

15" true-flat PPC with resistive touch control

The true-flat resistive touch display panel is elegant in appearance and easy to clean.

Daughter board interface for diverse MB

Proprietary daughter board ensures 100% compatibility between various mini-ITX MBs and panels.

PCI/PCIe x4 expansion slots

PCI/PCIe x4 slots support flexible expansion and increased functionality for diverse applications.

IP65-compliant

Innovative design features front panel with IP65 certification for dust and water protection.

Front LEDs indicate power status

Front-facing LED indicators allow users to easily check the system power status.

Supports certified mini-ITX motherboards

Compatible with various certified mini-ITX MB to support a wide range of application scenarios.
